Kit de herramientas equivalentes a las del fabricante original y adecuadas para volver a montar los árboles de levas en la culata en la posición de distribución correcta. Esto es obligatorio porque las culatas se han diseñado con un bastidor de retención del árbol de levas que se separa desde la culata a lo largo de la línea central de los tapones de los cojinetes del árbol de levas. Al volver a montar los árboles de levas existentes o nuevos, deben montarse correctamente en el bastidor de retención y, a continuación, han de sujetarse en su sitio durante el montaje en la culata. Los árboles de levas deben instalarse con esta plantilla de montaje del árbol de levas, de lo contrario los cojinetes del árbol de levas del bastidor de retención se romperán y la culata tendrá que sustituirse por una nueva.

Debido al amplio número de motores que abarca este juego, han de seguirse las instrucciones y los manuales técnicos del fabricante al volver a montar los árboles de levas, pues existen muchas diferencias concretas en la manera de utilizar la plantilla; además, han de utilizarse los elementos fijos de soporte del árbol de levas y las mordazas de alineación para los dientes del engranaje que sean correctos para cada motor específico. Por ejemplo, puede que los soportes del árbol de levas montados con pernos tengan que desmontarse o recolocarse en una posición concreta en función de las

instrucciones para un motor específico.

El juego consta de una plantilla, varios elementos fijos de soporte del árbol de levas, mecanismos de bloqueo y mordazas de alineación para los dientes del engranaje.

Herramientas OEM incluidas:
